

Product Change Notification

Product Change Notification Number: PN-00001

Effective Date: 02/03/2025

Title: Utilization of Torx Security Screw for Wireless Pin Devices

Product(s) Impacted: Subeca Wireless Pin

Reason(s) for Change: Material Upgrade

Changes Overview:

We have switched to a Tamper-Resistant Button Head Torx Screws, commonly used in publicly accessible applications to reduce/prevent unauthorized removal or tampering.

What does this mean for you?

- The change does not require action for any of your installed population.
- The new design maintains compatibility with existing meter models, but you will need to use a T25 Torx security bit or driver for register change outs with the new adapter.
- Should you require any assistance with the new version or have any questions, our customer support team is available to assist.

We appreciate your continued trust and support. Please don't hesitate to reach out to us if you have any concerns or need further clarification. Thank you for choosing our products!
